Date	Revision	Description
26 Feb 2024	01	Initial version. • 0 issues are added to Resolved issues. • 0 issues are added to Known issues.

API features

The following new or updated API functionality will be included in this release.

Enable Company Location Linking in the Opus Web UI and via API

This feature allows users with the role to link a company location to a network or an app using the new API. System Administrators must allow linking for a location before Application Administrators can link those locations to a network or app. A System Administrator can link their internal location to another company location or a trade partner who owns a TraceLink Network can link to a specific location within the company. For example, a trade partner who also owns a TraceLink Network can link to a specific location within your company to set up recall locations.

To successfully link, a company location must match at least one identifier that TraceLink has for the company. If linking is enabled, Application Administrators that are allowed to create links and trade partners that you are connected to in Partner Master Data can link to a specific location. If a company location is already enabled or inactive, then the Allow Linking icon is disabled. Both Opus and Track & Trace Services (TTS) customers can enable company location linking.

Impact analysis

- Interface options:
  - API
- Business segment impacts:
  - All business segments for both Owners and Partners.
