These patches are cumulative, and the most recent patch release includes functionality from all previous versions.

Revisions

Date	Revision	Description
21 Mar 2024	01	Initial version.
28 Mar 2024	02	The following updates have been made since the previous revision was distributed: • 6 issues are added to Resolved issues. • 0 issues are added to Known issues. • Updated the Enhancements to the UI to Provide Additional Information feature name to Enhancements to the UI to Provide Additional Functionality.
29 Mar 2024	03	The following updates have been made since the previous revision was distributed: • Clarified the Enhanced filtering Links option feature overview to explain that an error message occurs when no value is applied in the network drop down. • Enhanced the Updated information and options on the Users Screens feature overview to clarify exactly when the Assign to Administrator Role confirmation dialog appears.
30 April 2024	04	The following updates have been made since the previous revision was distributed: • Changed the Assign to Administrator Role button name and the Assign User to Administrator Role section name in the UI when assigning a user to an Application Administrator role in the Validation and Production Administration, solution version 5.0 solution release.

UI features

The following new or updated functionality will be included in this release.

Enhancements to the UI to Provide Additional Functionality

This feature provides support for UI enhancements that provide information about Links, assigning roles, and activating users.

Enhanced the failed Link options and descriptions in the UI

This feature introduces a new ↻ icon in the UI so System Administrators and Application Administrators can resubmit a failed Link with the same details that were previously added for the Link. Companies that own multienterprise apps can

© TraceLink Inc. 2009 - 2025 All Rights Reserved

link Partners and internal locations to those apps and their respective networks using Links. These Links allow the Owner and their linked entities to collaborate and exchange data. In some instances, the Link cannot be established.

The Link might fail due to the following reasons:

- The TraceLink system is not reachable because master data is not accessible.
- There is an issue importing bulk Links through a CSV file.
- The identifier, which is used for a Partner or internal location to link an app or network, is not already added to the TraceLink Network.
- An email address that the System Administrator or Application Administrator added when attempting to establish the Link does not belong to a user on the TraceLink Network

If this occurs, System Administrators and Application Administrators can resubmit a failed Link with the same details that were previously added for the Link. See for more information.

The feature also includes enhancements to the results table on the to display more details about the Link. The new columns include:

- Entity
- Type
- Roles
- Error Description
- Date Created

In a future release, users will be able to edit Link details before resubmitting a Link that failed to process.

Enhanced filtering Links option

This feature enhances the error description that displays when a users filters for a Linked Entity on the , tabs, and then selects Apply without selecting a network

© TraceLink Inc. 2009 - 2025 All Rights Reserved

from the drop down.

The feature also introduces a new My Company's Role column on the tabs on the View screens.

Updated information and options on the Users Screens

This feature includes a new Assign to Administrator Role confirmation dialog when a System Administrator assigns the role to a user who is not a member of their company using the assign an external user to the Application Administrator role functionality. The additional confirmation dialog allows the System Administrator to verify that they want to grant a Partner the Application Administrator role, which allows a user who is not a member of their company to perform administration tasks for the apps and networks associated with the Application Administrator role.

This feature allows users to by selecting Activate in the Action menu.

Additionally, the Assign to Administrator Role button name and the Assign User to Administrator Role section name in the UI is changed to Assign External User to Administrator Role and Assign External User to Administrator Role, respectively. When a System Administrator or Application Administrator assigns a user to the role, the Administrator now selects the Assign External User to Administrator Role button to open the Assign External User to Administrator Role section.

Impact analysis

- Interface options:
  - UI
- Business segment impacts:
  - All business segments for Owners.

System features

There is no new or updated system functionality included in this release.

Resolved issues

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

ID	Interface	Issue Description
35700: Users Can Edit Networks That They Do Not Own	Web UI	System Administrators or Application Administrators can edit networks on the Opus Networks and Classic Networks tabs which they do not own. This issue is resolved.
35710: Unable to Distinguish between Active and Deactivated Users in the Users in Opus Networks and Users in Class Networks tab	Web UI	While checking the users status on the Users in Opus Networks and Users in Classic Networks tabs, it is not possible to distinguish between active and deactivated users. Added a new status column indicating if a user is Active or Inactive. This issue is resolved.
35875: All Roles Removed for a Specific App When Trying to Remove One Role	Web UI	When a user removes a role assigned to an app in the UI, all other roles assigned to that app are removed. This issue is resolved.
35957: Send Invitation Box Sends a Notification Instead of an Invitation on Add Links Screen	Web UI	When a user is adding a Link, they fill out the Send Invitation To field and select Link. TraceLink does not sent an email invitation to the user and the user is not required to take an action. The Send Invitation field name is changed to Send Notification To. This issue is resolved.
35968: Error Message Displays when Adding a Link Without Selecting a Role	Web UI	When a user attempts to add a Link without at least selecting one role, the user receives an error message. This issue is resolved.
35972: Error Message Displays when Adding a Link Without Selecting a Role	Web UI	When a user updates the User email address in the User drop down (e.g. Users > Assign User to Network screen), the user's first and last name does not automatically updat. This issue is resolved.

Known issues

There are no known issues in this release.
