Purchase orders (EDIFACT)

Purchase orders allow companies to exchange data about requests to purchase goods and services with upstream and downstream supply chain trade partners without giving these trade partners access to their serialization system of record. These purchase orders can be used to request specific products and quantities from their Partners and confirm that partners have the requested product and quantities on hand and intend to fulfill the request via a purchase order acknowledgment.

The Purchase Orders EDIFACT ORDERS message sends a request and commitment from the buyer to pay the seller for the sale of specific products or services to be delivered in the future.

 Contact your TraceLink Services representative for more information about integrating with this message.
