TraceLink Announces \$93 Million Investment Round to Accelerate Expansion of Information-Sharing Network Platform Across Life Sciences

TraceLink Inc., the World's Largest Track and Trace Network for connecting the life sciences supply chain and providing real-time information sharing for better patient outcomes, today announced that it has closed a \$93 million investment round led by Georgian Partners, with new investors Vulcan Capital and Willett Advisors LLC, and participation by all existing investors: FirstMark Capital, Volition Capital, F-Prime Capital and Goldman Sachs. TraceLink has also announced that Tyson Baber from Georgian Partners has joined its Board of Directors. Since its founding in 2009, TraceLink has attracted a total of \$167 million in investments.

This investment will fuel the digitalization of the global pharmaceutical supply chain through the integration of real-time information-sharing, in order to create a highly predictable supply chain for the industry. Specifically, the capital will enable TraceLink to expand into adjacent application areas, such as supplier collaboration, patient communities, personalized medicine, predictive care and gene therapies. TraceLink will also use the funds to further reinforce its R&D and Services organizations to support its rapidly growing customer base of 930+ pharmaceutical manufacturers, contract manufacturers (CMO), wholesaler distributors, third party logistic providers (3PL), hospitals and pharmacies.

"As we continue to execute on our vision to build the digital supply chain, we are making strategic investments in machine learning, artificial intelligence and

blockchain, ultimately delivering an open development platform for information sharing and predictive analytics,” said Shabbir Dahod, president and CEO, TraceLink. “Georgian Partners’ deep expertise will significantly aid our efforts in bringing global information-sharing applications to market, driving the entire industry forward to solve critical business challenges through supply chain digitalization.”

Tyson Baber, Partner, Georgian Partners, commented, “The pharmaceutical industry is at a digital tipping point and TraceLink is in the ideal position to drive major advancements in this transformation with its information-sharing network platform. We are very excited to partner with TraceLink on its next phase of growth and look forward to helping guide the company on its journey to shape the future of the digital drug supply network, leveraging our experience and clients’ collective expertise in artificial intelligence and machine learning.”

TraceLink’s network connects over 270,000 pharmaceutical companies, CMOs, wholesale distributors, 3PLs, parallel importers, repackagers, hospitals and pharmacies worldwide. This unique network platform will enable TraceLink to help the life sciences industry address fragmented and manual information-sharing processes, which in aggregate, cause over \$100 billion in annual losses from drug diversion, revenue leakage, and operational inefficiencies due to a lack of effective information exchange capabilities.
