Proactive Monitoring for Rapid Reporting and Decision Making with SPI

“Management is always asking, ‘How can we proactively look at our serialized operations?’ Having a proactive view helps us manage anomalies and detect them before they happen.”

Daryl Chin

Engineering Manager

Contract Pharmaceuticals Limited

In this conversation with CPL's Daryl Chin, TraceLink Solutions Consultant Rich Basile shows how “top-down” visibility with SPI enables management teams to make proactive, data-driven decisions, with instant visibility into all the products that produced within the last week, month, or quarter, with the ability to see:

- Lots that have been commissioned
- Packaging configurations, including units, inner packs, cases, and pallets
- Products produced by location, including the ability to search by Global Location Number (GLN)

With this high-level view and SPI’s advanced search and filtering tools, companies can generate fast reports and respond quickly to management queries—without

having to “knit together” data from multiple systems or rely on IT to pull together reports. With SPI, companies can leverage serialization data to track and forecast quarterly production and take proactive action to ensure that products are reaching customers.
