Is Your DSCSA VRS Vendor Exiting the Market? TraceLink's Network-Based Product Verification and Master Data Sharing Solution is the Proven, Risk-Free Path to Rapid Compliance!

On-Demand Webinar

An exclusive webinar for Pharmaceutical Manufacturers and Wholesale Distributors seeking to immediately reduce VRS compliance risk.

Under the final phase of the **U.S. Drug Supply Chain Security Act (DSCSA)**, pharmaceutical manufacturers and their supply chain partners have until November 27 to implement a 100% electronic and fully interoperable system for product identifier verification for saleable returns and suspect/illegitimate product investigations. This requirement coincides with the requirement to exchange serialized product data and the trade partner requirement for GTIN and other product master data sharing. TraceLink partnered with industry leaders in 2017 to collectively design what is now called the Verification Router Service (VRS) network model for managing DSCSA and supply chain verification needs. Since then, over 160 companies have deployed TraceLink for verification capabilities, including flexible support for Level 4 serialization repositories that are managed by TraceLink or other solution providers such as SAP, Antares/Rfxcel, Systech, and

others.

Recently, at least one VRS vendor has indicated a change in market strategy that may reduce viability for existing customers. As a result, many pharmaceutical companies are rapidly exploring alternative approaches for supporting this requirement, in addition to adjacent needs for EPCIS data exchange, product status distribution, GTIN/product master data sharing, dropship information sharing, and compliance exception management.

Watch this on-demand webinar to learn how to take the risk out of the very visible VRS compliance requirement. Register to attend this live webinar now and you will learn:

- How TraceLink's innovative Level 5-only deployment model can provide manufacturers with a risk-free path to meet the November 2023 deadline for VRS without disrupting their existing serialization systems or integrations to other operational systems.
- How GTINs and other product master data can be shared across trade partners using the TraceLink verification network application.
- How to quickly and easily TraceLink's verification and master data sharing solution can be activated without disrupting existing system deployments.
- How TraceLink reduces the time, cost, and risk associated with DSCSA 2023 VRS compliance.

TraceLink Product Verification is the fastest, lowest risk, and most economical path to VRS compliance for the final phase of DSCSA. Fill out the form to watch the webinar now and learn why 60% of all GTINs synced to the VRS Lookup Directory belong to TraceLink customers!
