Enhance Pharmacy Inventory Management by Operationalizing DSCSA Compliance & Reverse Logistics

A Collaboration Between TraceLink, Tecsys, and PharmaLink

The end of the DSCSA stabilization period in November 2024 will require pharmacies to implement new processes for compliance, intensifying demands on skilled pharmacy staff.

Operationalizing DSCSA workflows and improving enterprise system integration is key to minimizing pharmacy disruption from DSCSA and enhancing core operational processes. This webinar explores how to use serialized product data made available through DSCSA to revolutionize inventory management, product recalls, reverse logistics, and more.

Watch this on-demand recording to see how solutions from TraceLink, Tecsys, and PharmaLink, the leaders in DSCSA compliance, pharmacy inventory management, and reverse logistics, enable health systems to:

- Gain visibility into serialized inventory across the entire pharmacy or health system.
- Maximize returns credits from expiring product by leveraging digital expiry

and lot data.

- Automate recalled product identification through targeted, item-level digital notifications.
- Expedite reverse logistics processes and increase return credit revenue.
- Simplify management of mixed 340B/non-340B inventory across the health system.

And that’s just the beginning. Watch the webinar and discover the quick wins available to your team through the power of supply chain digitalization.

Speakers:

Dan Walles,

General Manager of Traceability & Compliance,

TraceLink
