Introducing OPUS Ensemble

TraceLink's First Next-Generation Solution

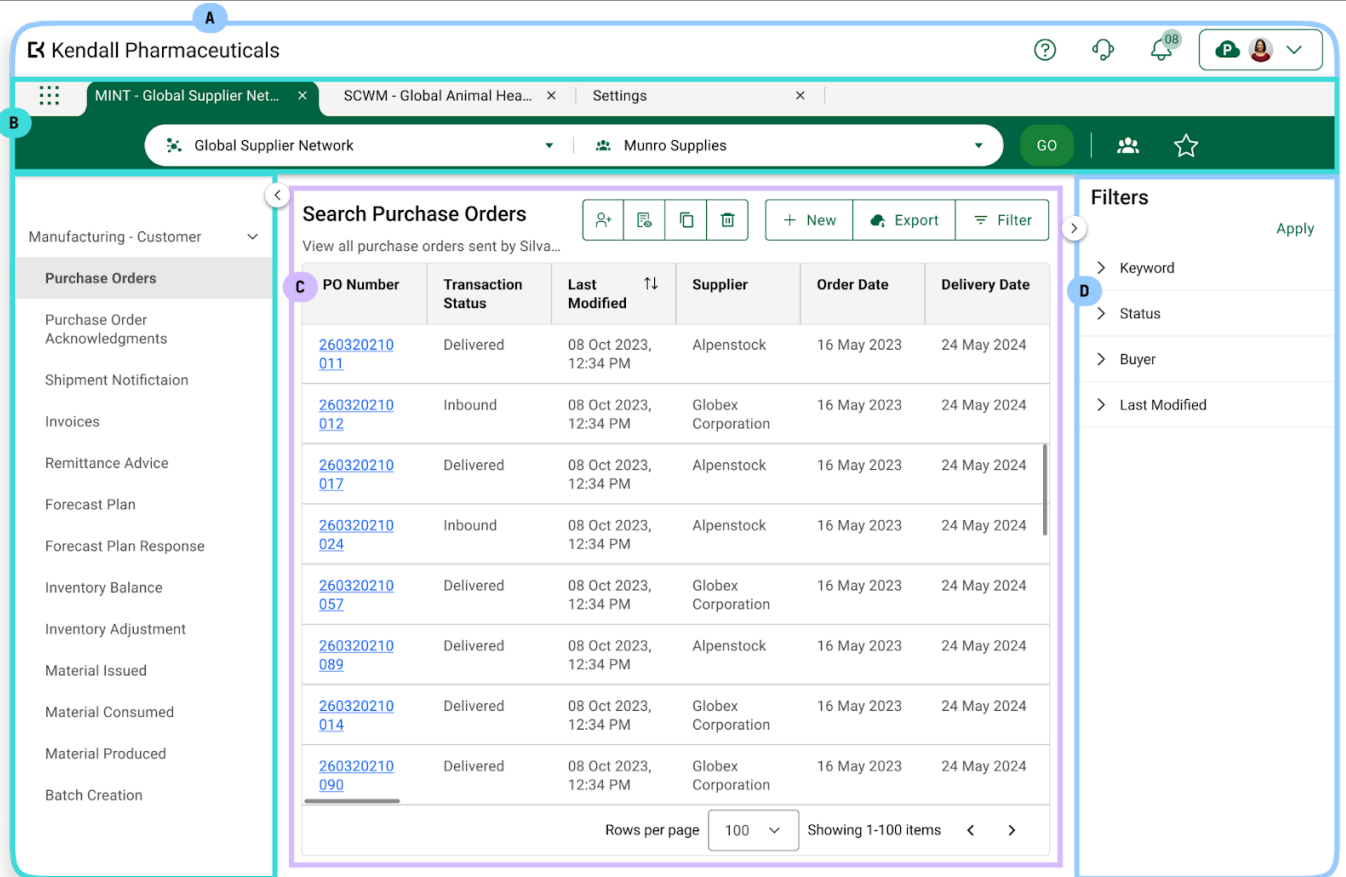

OPUS Ensemble: The Next Evolution in Multienterprise Collaboration

TraceLink is introducing OPUS Ensemble, our first next-generation solution on the OPUS Platform. OPUS Ensemble is TraceLink's global user experience designed to revolutionize how users interact with our platform. OPUS Ensemble seamlessly integrates user context, personalized settings, powerful navigation, and company-specific context, providing instant access to notifications, help, support, and everything you need to do your job efficiently. With intuitive, browser-like tabs paired with TraceLink's unique network navigation system, OPUS Ensemble offers a streamlined and efficient user journey.

Explore TraceLink's Next-Generation Experience

Explore the comprehensive OPUS user experience (UX) through the following key areas:

A - User Context: Prominently placed at the top, ensuring users always have their bearings. This fixed area provides a reliable and familiar interaction journey.

B - Navigation: Clearly guides users to their desired solution, network, or business object, facilitating easy content exploration while enabling parallel work through tabs.

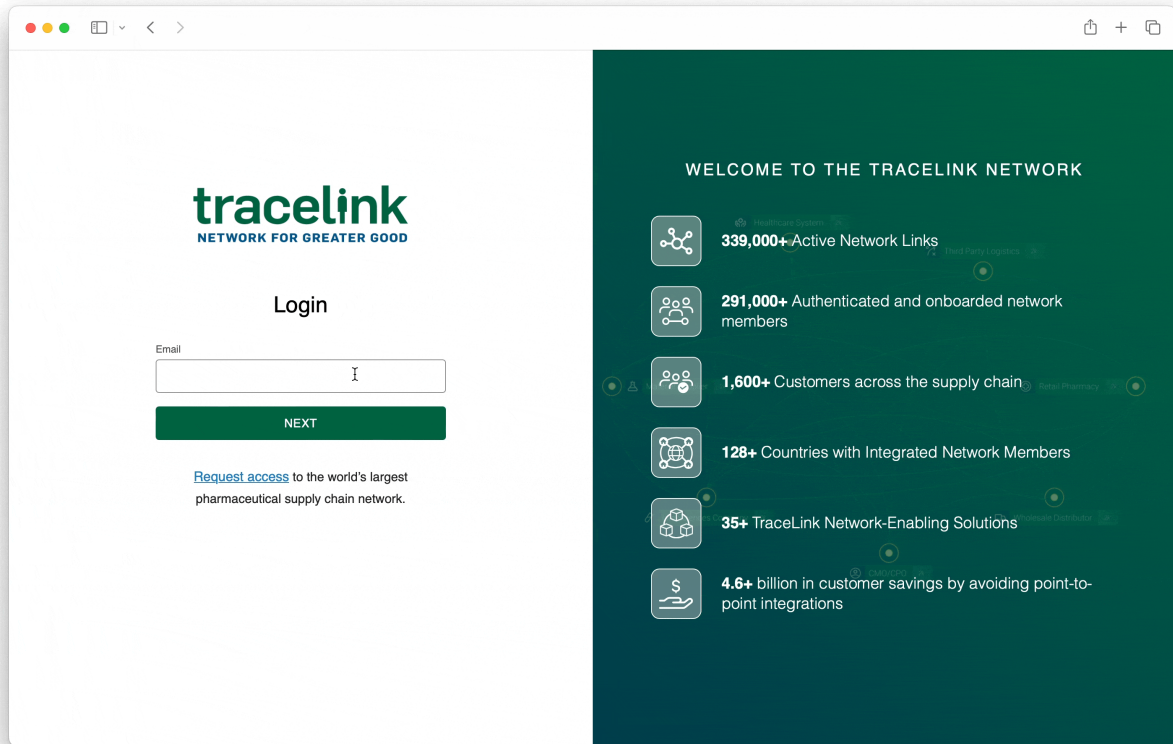

C - Main Content Area: Provides a rich, interactive space for effortless engagement, whether consuming or collaborating.

D - Toolbar and Push Panel: Provides convenient access to key actions.

Core Features of OPUS Ensemble

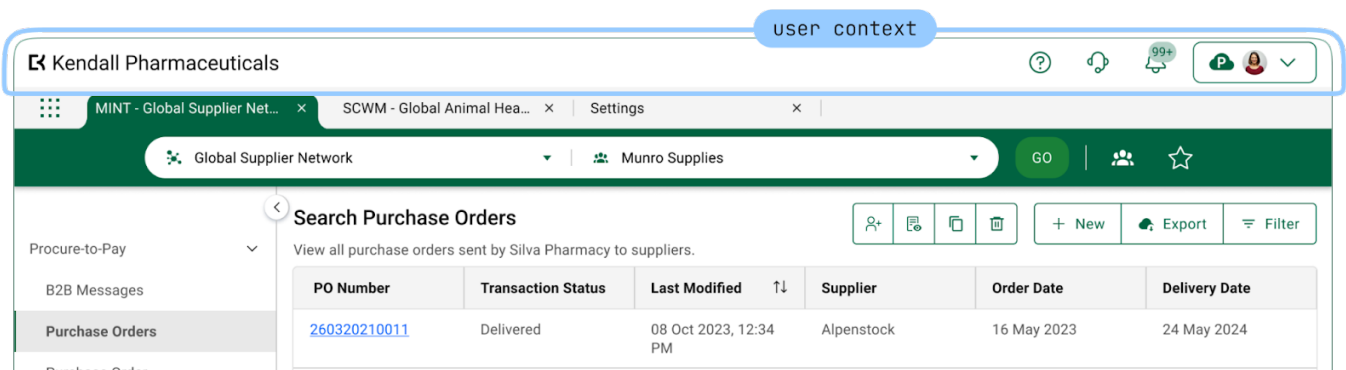

One Destination for All TraceLink Solutions

www.OPUS.tracelink.com is your one-stop destination for all TraceLink solutions.

See TraceLink's newest login experience.

Centralized and “Sticky” User Context

A user's key information and support resources are always available.

- **Quick-Click TraceLink Account Switcher** – Easily change your environment and account.
- **Proximity To Help and Support** – Access support and documentation from any screen.

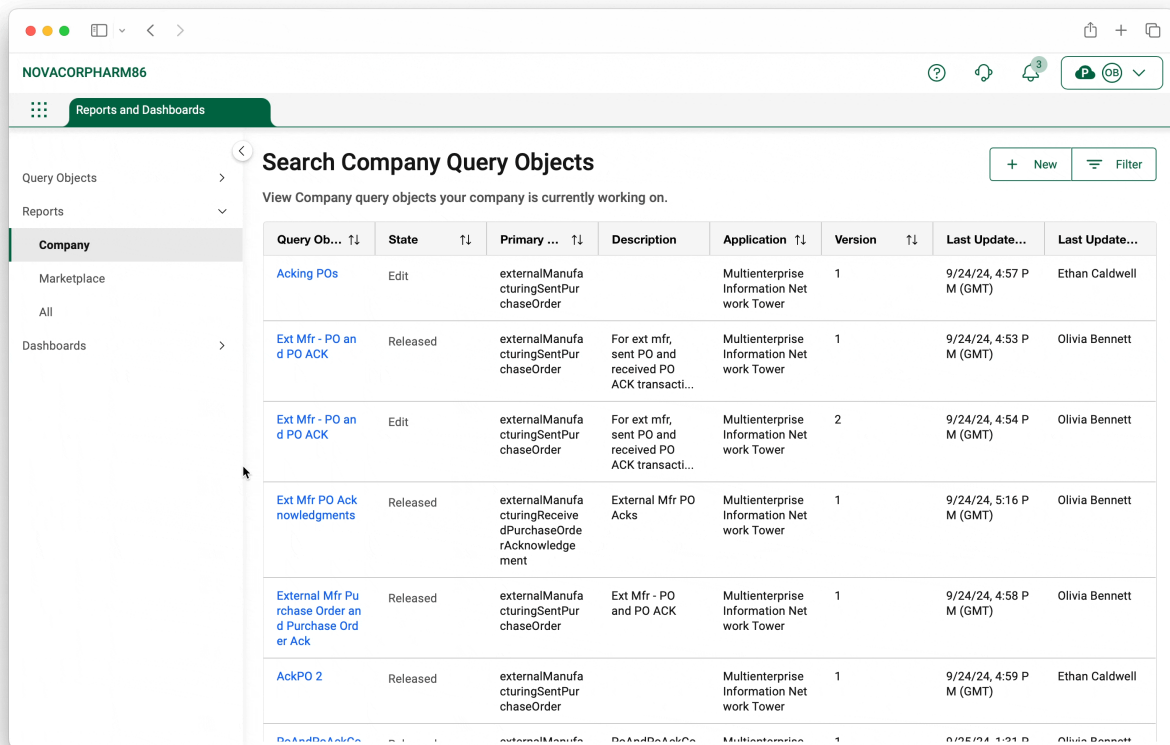

- **Personalized Experience** – See company information in the top-left corner.
- **Streamlined UI Notifications** – Collaborate more effectively with one-click access to notifications.

Enhanced Navigation

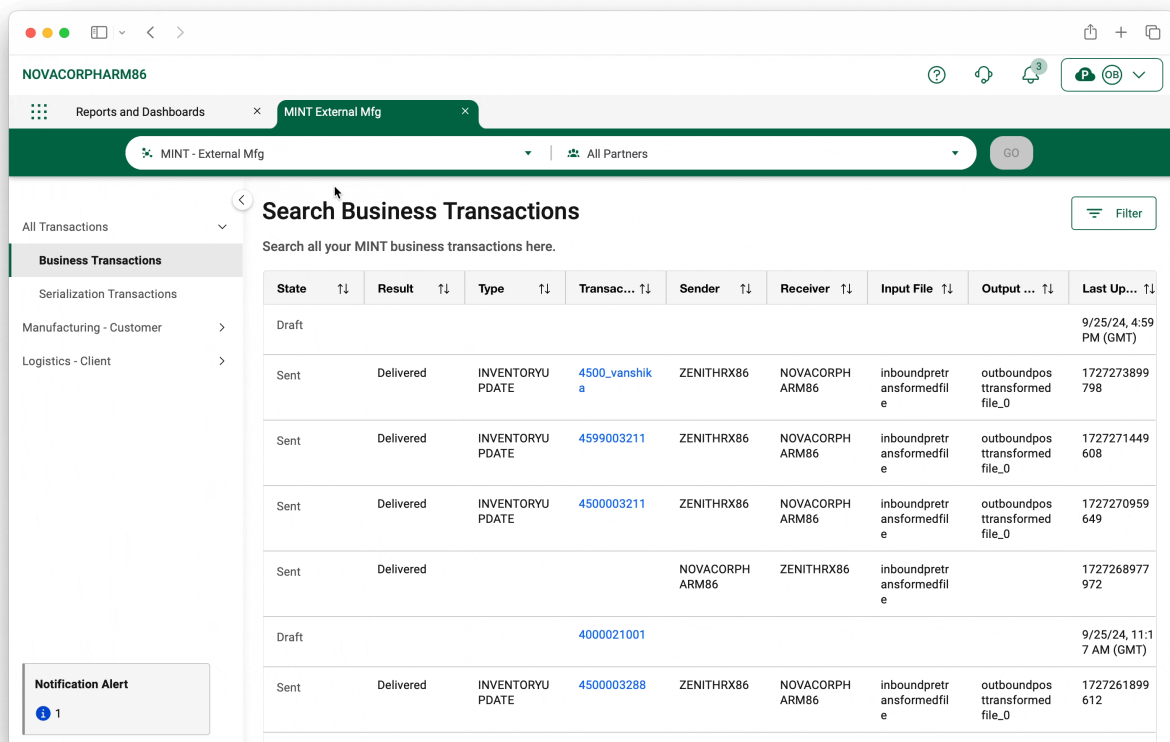

- **Introduction of Tabs** – Browser-like tabs enable users to work in multiple solutions simultaneously, vastly improving productivity and reducing the number of clicks needed to validate actions. Tabs will persist even after you log out and log back in again. This multitasking capability ensures a smoother, more efficient work experience.

Tip: When you log out, keep your most frequently used tabs open so you don't have to reopen them each time you log in. Additionally, you can open multiple tabs for one product and perform different tasks in parallel.

- **Network Navigation Enhancements** – With your company information always visible in the top-left corner, OPUS Ensemble delivers a cleaner and more intelligent navigation experience. The simplified network navigation displays your customer-defined network name and Partner name when working in a multienterprise context (e.g. MINT), while reserving vertical real estate in your enterprise solutions (e.g. Administration, Master Data) where the network navigation will not display. Regardless of the solution type, all processes are moved to the side menu for increased visibility and faster access.

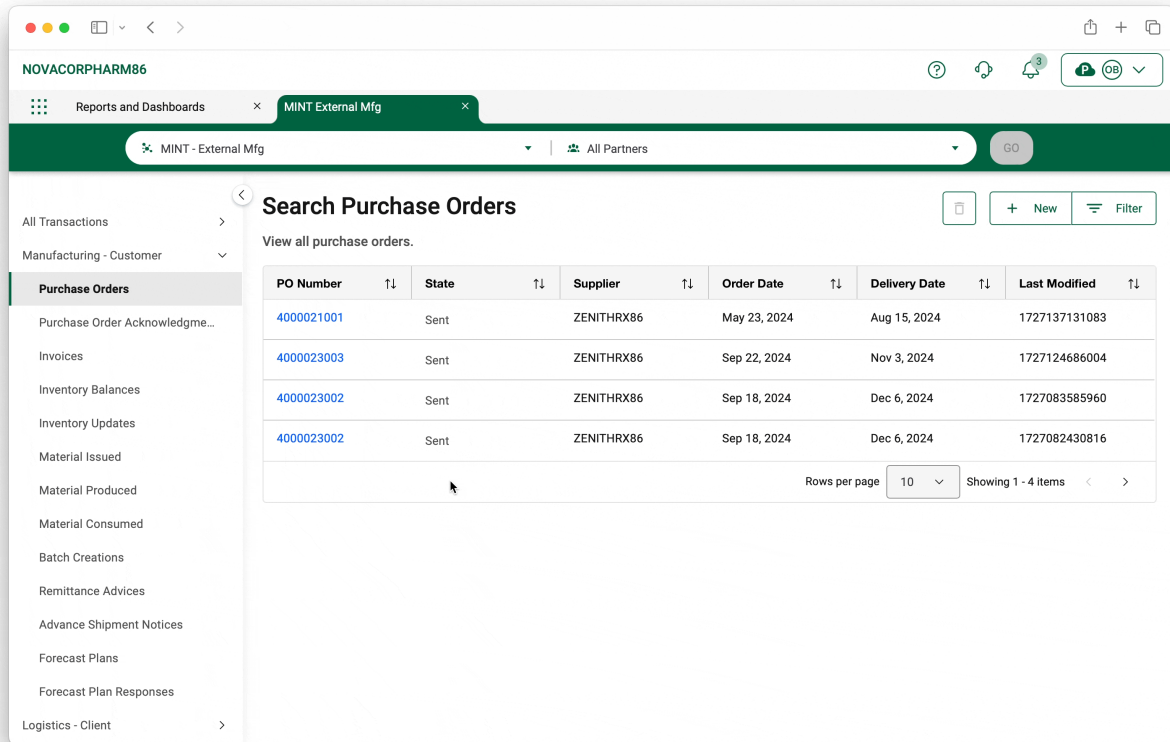

See how a Network tab (including the network composer) opens from the "My Networks" selection in the Main Menu.

Watch as the OPUS Solution Environment (OSE) opens, featuring the Enterprise tab.

Improved Layout

The next-generation experience also includes a more efficient layout, featuring a right-hand push panel that ensures awareness of key information without the intrusion of an overlay.

Watch the filter panel open and the content on the left adjust dynamically.

Blending Proven Design Patterns with Next-Generation Innovation

The next-generation OPUS experience harmonizes the familiarity of proven and familiar UX patterns with groundbreaking innovations unique to our network, all seamlessly brought together in the new OPUS Ensemble experience. This confluence of tried-and-true expertise and pioneering paradigms empowers our users to compose and orchestrate solutions with unprecedented ease and agility, setting a new standard for multienterprise collaboration and digital transformation.

Bob Sturim, Chief Technology Officer

We took the feedback from our customer base on our generation one interface when rolling out Ensemble... our goal was to make improvements that enable customers to communicate, collaborate, and enhance the connectivity of their OPUS applications.

Watch Bob Sturim guide you through the OPUS Ensemble experience and key features.

Design Considerations With Roles and Policies

User access in a solution is managed through permissions, roles, and policies: permissions define specific actions, roles group these permissions for streamlined access, and policies enforce the logic that determines what users can do, ensuring data protection and security compliance.
