System features

The following new or updated system functionality is included in this release.

Enhance the Ability to Administer Networks

This release includes new internal APIs to support the panel in the UI.

Impact analysis

The impacts for this feature are the same as the feature in the Administration,

Resolved issues

Administration, version 2024.1.1

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

ID	Interface	Issue Description
36259: Unable to Add a User to the Responsible User at Accountable Entity Field	Web UI	There is a check to count the number of Links created for a company. If the number of Partners for that company is a large number, the request is timed out and the Link is not created. This issue is resolved.
36395: The Role Value of the Owner Company is Not Populated	Web UI	After an Owner company is selected and a user adds an external user to an app or network, the user can add a user name, select a team and specify a role. The role value is not displaying the correct results. This issue is resolved.

Administration, version 2024.1.0

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

ID	Interface	Issue Description
33079: Existing Product Track Partner Membership Not Updated When New Subscriber Link Added	Web UI	An issue occurs when a System Administrator creates a service Link and adds a partner company user as a subscriber. If the System Administrator deletes the service Link and attempts to add the same service Link back and re-adds the same user as a member of the service Link, the existing Product Track service membership is not updated. This issue is resolved.
33146: After Adding a User as member to a Link, the Page Auto Navigates to the Why TraceLink page when the User Refreshes the Page	Web UI	After adding a user as member to a Link and refreshing the page, a user is directed to the Why TraceLink page. This issue is resolved.

ID	Interface	Issue Description
34361: Duplicate Process Network Not Displaying Error Messages	Web UI	When a System Administrator attempts to create a new process network using a name for an existing process network, an error message is not displayed and no new process network is created since one already exists with that name. The system should indicate the process network with that name already exists. This issue is resolved.
34532: Linked Entity Filter Not Displaying Partner Entity Value in the Classic Links UI Drop down	Web UI	The linked entity filter does not find the Partner entities for the selected network in the classic Links UI and it is displaying duplicate entries for the owner's entity in the drop down. This issue is resolved.
34533: Failed Links UI Not Displaying Data for Application Administrators on Owner Company	Web UI	The failed Links tab is not displaying any failed Links for Application Administrators. System Administrators can see the failed Links. This issue is resolved.

Known issues

Administration, version 2024.1.1

There are no known issues in this release.

Administration, version 2024.1.0

There are no known issues in this release.
