# How to Optimize Pharmacy Resources and Accelerate Reimbursements by Digitalizing Drug Recall Processes

Pharmacies are facing a constant stream of drug recalls they must respond to. And with many pharmacy teams operating at capacity, each new recall means spending less time with patients.

But what if you could precisely identify whether you had received recalled product, how much you received, and at which location, all in a fraction of the time?

This webinar looks at how TraceLink helps you capitalize on your serialized product data to gain that level of precision. Join us live to see how digitalizing your recall process enables you to:

- Identify recalled product faster by filtering out irrelevant recalls.
- Spend less time hunting for recalled product by getting its exact location.
- Automate recall workflows for faster communication across locations.

Save your seat today and see how one pharmacy was able to locate recalled product 35% faster with TraceLink Digital Recalls.
