Administration, version 2025.1.0

Find out what's new in the Administration app that provides support for companies that own OPUS or Track & Track (TTS) apps to link Partners and internal locations to those apps and their respective networks.

Release information

This document describes the TraceLink capabilities included in the Administration, version 2025.1.0 release, which is available on Validation on 24 April 2025 and Production on 22 May 2025.

The following apps are impacted by this release and will be updated to the version listed:

- Administration, version 2025.1.0

  Solutions supported by this app version:

  ◦ Administration, solution version 10.0.0

⚠️ This Help Center is subject to change based on the deployment of the release. In the event of changes, the Help Center will be updated within one week of release deployment. Deployment completion can be confirmed in the TraceLink

Release Notice email.

Revisions

Date	Revision	Description
27 Mar 2025	01	Initial version.
24 Apr 2025	02	The following updates have been made since the previous revision was distributed: • 1 issue is added to Resolved issues. • 0 issues are added to Known issues.

API features

There is no new or updated API functionality included in this release.

System features

The following new or updated system functionality is included in this release.

Manage B2B Integrations

Enable Partners to View Owner Company and Locations

While configuring company Link settings for a B2B connection Partners can now view information about Owner company and company locations under Company or Location ID field.

Impact analysis

The impacts for these features are the same as the Enable Partners to View Owner Company and Locations feature in the Administration, solution version 10.0.0 release.

Edit Message Settings for Partners

- Inbound-Outbound tab is renamed to Message Settings.
- **Create Message Settings** - Message settings are created by default for owner and partner by adding a Partner company, Partner location, or Owner location in any TraceLink app through a link If the Partner company link is

removed from all networks for that application, then message settings is also deleted.

- **Edit Message Settings for Partners** - Partners can now edit Message Settings configurations for links where they are added as a partner by editing the Link Identifier field in the Link section and updating the delivery options in the Message Delivery Rules section.

Impact analysis

The impacts for these features are the same as the Edit Message Settings for Partners feature in the Administration, solution version 10.0.0 release.

B2B Integration Enhancements

UI updates have been made to the Location Settings tab on the B2B Integration screen.

When a System Administrator adds a Team while adding integration access, the Integration Principals table is enhanced to display the Team name in a dedicated column alongside the Application, Network, and Role.

Impact analysis

The impacts for these features are the same as the B2B Integration Enhancements in the Opus Administration UI feature in the Administration, solution version 10.0.0 release.

Configure Multiple Message Types

This feature introduces the Message Type drop-down in the OTHER Choreography Type section on the Configure Link Settings screen, allowing System Administrators to add multiple message types, each with its corresponding Message Code and Message Function.

Impact analysis

The impacts for these features are the same as the Add Multiple Message Types in Configure Location Integration feature in the Administration, solution version 10.0.0 release.

Enhancements for Networks

- Selecting Company Solution under Add Network and Edit Network now displays both active and inactive solutions.

- The Solution names under the Add Network and Edit Network field has been renamed to enhance consistency across the user interface.

Impact analysis

The impacts for these features are the same as the Edit App Functionality for Enterprise Apps feature in the Administration, solution version 10.0.0 release.

Resolved issues

Administration version 2025.1.0

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

ID	Interface	Issue Description
CMCP-38328: Previously Assigned Roles Unassigned When Serialization Roles Are Added	API	Assigning serialization roles unassigns existing roles and returns an incorrect API response. This issue is resolved.

Known issues

Administration version 2025.1.0

There are no known issues in this release.
