# Optimize Working Capital by Orchestrating Serialized Product Inventory Transactions and ASNs with Network Partners

At FutureLink Boston 2025, Tereance Puryear, Manager of U.S. Solution Consulting at TraceLink, delivered a deep dive into the operational bottlenecks created by fragmented supply chain data—and how orchestrating serialized inventory transactions and ASNs across your network can unlock dramatic improvements in working capital, customer service, and supply chain agility.

Puryear lays out the real-world consequences of poor visibility and manual processes—missed shipments, bloated inventory, and mounting penalties—and shows how **TraceLink MINT** and OPUS Reports & Dashboards can help supply chain leaders move beyond isolated systems toward synchronized, insight-driven execution across CMOs, 3PLs, and direct suppliers.

- Why supply chain agility starts with real-time, end-to-end inventory visibility and ASN orchestration
- How digital workflows reduce manual work, free up capital, and improve service levels across the partner network
- What it takes to scale integration across all your partners—without slowing
