Improve Supply Planning and Inventory Management with Supply Chain Intelligence Powered by DSCSA EPCIS Data

Serialized EPCIS data isn't just for compliance—it's a strategic asset. At FutureLink Boston 2025, Steve Keighley, Principal Solution Consultant at TraceLink, showed how pharmaceutical companies can use **Serialized Product Intelligence (SPI)** to digitalize and analyze their serialization data to uncover root causes of DSCSA exceptions, optimize inventory levels, and improve supply planning responsiveness. With deep visibility into product movements across all warehouses and trading partners, SPI helps reduce operational costs and improve customer service across the supply chain.

Watch to learn:

- How to reduce DSCSA exceptions and resolve them faster with advanced data mining tools
- Why partial serial number queries and real-time shipment data improve operational efficiency
- How SPI enables proactive supply chain decision-making through exception insights and automation

Start turning compliance data into actionable supply chain intelligence—watch the

full session now.
