## Configure TraceLink for Reports and Dashboards

This topic describes the configuration steps required before using Reports and Dashboards.

### Assign Reports and Dashboards roles

See the [Administration Help Center](#) for information about how to assign Reports and Dashboards roles to users.

#### Roles

- Report Designer – Allows users to create, configure, and manage query objects, reports, and dashboards.
- Report User – Allows users to create, configure, and manage reports and dashboards.

Users' access to reports and dashboards in a solution is determined by their role in the solution, not their Reports and Dashboards role.
