What's new in the Standard
Link Actions, version 2025.2.0

Release information

This document describes the TraceLink capabilities included in the Multienterprise
Process Link, Standard Link Actions, version 2025.2.0 app release which is
available on Validation on 12 Jun 2025 and Production on 26 Jun 2025.

⚠️ These release notes are subject to change based on the deployment of the
release. In the event of changes, the release notes and any related documentation
will be updated within one week of release deployment. Deployment completion
can be confirmed in the TraceLink Release Notice email.

Revisions

Date	Revision	Description
05 Jun 2025	01	Initial version.
12 Jun 2025	02	The following updates have been made since the previous revision was distributed: • 0 issues are added to Resolved issues. • 0 issues are added to Known issues.

API features

Standard Link Actions, version 2025.2.0

The following new or updated API functionality is included in this release.

Exchange data with Netsuite via MINT Standard Link Actions

Companies can use Standard Link Actions to asynchronously exchange data between TraceLink and an ERP system with OAuth2 authentication. The XTT-Link-Actions app uses JavaScript code snippets to interact with external systems directly. Connecting directly to external systems enables Multienterprise Information Network Tower to use XTT javascript snippets to interact with external ERP systems and automatically pull transactions from and send transactions to external systems in the formats used natively by those systems. TraceLink pulling and pushing transactions in formats native to external systems enables companies to use Multienterprise Information Network Tower and continue doing business in the formats they do today without having to convert their data into additionally formats accepted by TraceLink. The javascript code for a link action is stored is stored in the Global Catalog Exchange (GCX) or the Shared Catalog Manager (SCM).

Advance Shipment Notices Outbound

Standard Link Actions uses the advance shipment notices API to push Advance Shipment Notice transactions to the Netsuite ERP system. A Netsuite advance shipment notice procures detailed information about the shipment's contents, logistics, and expected delivery date. After TraceLink receives and processes the advance shipment notice transaction, it is available for users to view or edit in the Web UI.

The following new message is available for advance shipment notice in this release:

- STD_Netsuite_advanceShipmentNotice_OB

Impact analysis

- Interface options:
    - API
- Business segment impacts:
    - All business segments for both Owners and Partners

Sales Order Inbound

Standard Link Actions uses the sales orders API to pull Sales Order transactions from the Netsuite ERP system. A Netsuite sales order is an agreement outlining the goods or services to be delivered to the customer, confirming the terms of the sale. After TraceLink receives and processes the Sales Order transaction, it is available for users to view or edit in the Web UI.

The following new message is available for sales order transaction in this release:

- STD_Netsuite_SalesOrder_IB

Impact analysis

- Interface options:
    - API
- Business segment impacts:
    - All business segments for both Owners and Partners
