See POET for Compliance Exceptions in Action: Resolving DSCSA Issues at Scale

At FutureLink Boston 2025, TraceLink unveiled a live demo of POET for Compliance Exceptions, showing how pharmaceutical manufacturers, distributors, and dispensers can **resolve DSCSA compliance issues faster**, more efficiently, and in full alignment with HDA-defined exception types. This powerful solution replaces emails, spreadsheets, and portals with a centralized, multienterprise workspace for exception intake, triage, task assignment, resolution, and reporting.

Built on the TraceLink OPUS platform, POET empowers business users to configure and manage shared workflows across internal teams and external partners—no IT support needed. Exception records can be created automatically through APIs or by warehouse operators in real time. Suppliers and partners are notified immediately, and task ownership is clear from start to finish. Dashboards and reports turn exception activity into actionable insight—helping teams prevent product delays, maintain compliance, and protect patient access to critical medicines.

Watch the demo to see how POET for Compliance Exceptions transforms exception management from a fragmented, manual process into a streamlined, scalable workflow—powered by the industry's leading pharmaceutical supply network.
