U.S. Wholesaler Is Integrating EPCIS and Business Transactions with MINT

A U.S.-based pharmaceutical and medical devices wholesaler chose TraceLink MINT to consolidate serialization and procure-to-pay (P2P) digitalization into a single robust platform—creating real-time synergies between financial and compliance data flows.

With over 500 trading partners, the wholesaler is aiming to reduce inefficiencies, errors and costs associated with maintaining separate systems for DSCSA and EDI transactions.

By implementing a single integration to the TraceLink network, the wholesaler will be able to automate the exchange of procure-to-pay data, reduce human error and achieve a unified view of real-time commercial and compliance data to accelerate business decisions.

Target KPIs:

- 100% automated P2P operations
- 50%+ less manual data entry
- 60%+ faster supplier onboarding

Key Challenges:

- Multiple systems for DSCSA and EDI increases costs
- Manually entering POs consumes staff time
- Multiple systems introduces errors in the P2P process

MINT enables seamless collaboration across partners—including 3PLs, wholesalers, and dispensers—creating real-time synergies between financial and compliance data flows.
