See How Business Users Orchestrate Multienterprise Supply Chain Processes with POET—No Coding Required

Many supply chain processes are still managed with spreadsheets, emails, and other outdated tools that were never designed for complex, multienterprise processes. The result is wasted time, missed deadlines, and limited visibility into critical activities.

TraceLink Process Orchestration for Empowered Teams (POET) changes that. Built on the OPUS platform, POET gives business users the power to design, configure, and deploy processes without writing a single line of code—replacing fragmented tools with a modern environment that ensures every task is visible, traceable, and executed consistently across teams and partners.

In this short demo, you'll watch a user create and launch a manufacturing incident process in just minutes. From customizing data fields and page layouts to setting permissions and initiating partner actions, POET makes process orchestration faster, more transparent, and easier to scale.

In this demo, you'll see how POET enables business users to:

- Configure and launch new processes with intuitive, no-code design tools.

- Extend and adapt data models to fit specific business needs.
- Accelerate issue resolution with visibility, accountability, and scale.

Watch the demo to see how POET empowers life sciences and healthcare organizations to orchestrate processes with speed, visibility, and control.
