

No-Code Agentic Orchestrations Platform: OPUS Agents and Amadeus

In the era of intelligent automation, transparency and accountability are essential. At **FutureLink Barcelona 2025**, Siva Umpathy, Director of Product Development at TraceLink, demonstrated how OPUS Agents and the Amadeus assistant are redefining enterprise AI—providing tools that organizations can trust, verify, and understand.

Rather than delivering generic chatbots, TraceLink is introducing AI teammates that operate under human supervision, follow defined intents, objectives, and tasks, and make context-driven decisions within clear guardrails. Using the same reasoning framework as OPUS Brain, these agents bring visibility, auditability, and human-in-the-loop governance to digital orchestration—empowering users to build, manage, and oversee intelligent assistants across every process network.

Key takeaways:

- How OPUS Agents use defined intents, objectives, and tasks to create accountable, human-guided automation.
- The role of Amadeus as an enterprise-ready assistant that builds solutions, reports, and dashboards through natural language.
