Digitalizing the Logistics Network to Improve Decision-Making and Feed Agentic AI

The future of logistics is being defined by those who turn data into action.

In this **FutureLink Barcelona 2025** session, Anna Mansurova, Head of Healthcare IMEA at Hellmann Worldwide Logistics, and Henrik Killander, Global Head of Product Development and Partnerships, Integrated Supply Chain Engine at Maersk, share how digitalizing logistics networks is transforming decision-making, strengthening resilience, and laying the groundwork for agentic AI. They explain how real-time visibility, predictive analytics, and intelligent automation are reshaping how logistics teams anticipate disruptions and collaborate across global healthcare supply chains.

Key Takeaways:

- Why resilience and continuously refreshed data are essential foundations for agentic AI.
- How predictive analytics and intelligent agents can reduce stock-outs, forecast congestion, and improve on-time delivery.
- The mindset and process changes needed to move from manual control-tower management to proactive, AI-assisted decision-making.
