Integrate Your Way with End-to-End, Multi-Modal Interoperability for Supply Chain Transactions Across Every Partner

End-to-end supply chains depend on dozens of partners, systems, and formats—but most organizations are still juggling separate portals, custom integrations, and data transformations for every relationship. **TraceLink MINT** replaces that complexity with a single, scalable way to exchange supply chain transactions in any format across every partner. With multi-modal interoperability, each partner can work the way they prefer while sharing the same real-time transaction data.

In this short demo, you'll see how TraceLink OPUS and MINT enable a manufacturer and its contract partner to exchange a forecast plan using different systems and formats—without custom development, manual translations, or portal logins. With the "Integrate Once, Interoperate with Everyone™" capability, one inbound transaction can flow across your network in the format each partner requires, creating a shared, consistent view of every step.

In this demo, you'll see how TraceLink MINT delivers:

© TraceLink Inc. 2009 - 2025 All Rights Reserved

- **Multi-modal interoperability** that lets partners transact through formats like EDI X12, SAP IDocs, APIs, SFTP, and more, or directly in the MINT user interface.

- **A single inbound integration** that can transform and deliver transactions to every partner in their preferred format.

- **A shared view of supply chain transactions** that lets both parties see the same canonical data, inbound details, outbound transforms, and processing status.

- **End-to-end transaction support** that scales across suppliers, CMOs, 3PLs, distributors, dispensers, and brand owners.

Watch the demo now to see how TraceLink MINT simplifies integrations, accelerates partner onboarding, and powers end-to-end supply chain transactions through multi-modal interoperability across every partner.
