Carrier shipment statuses transactions

The Carrier Shipment Statuses facilitates the exchange of shipment status updates between a carrier (e.g., a trucking company or 3PL) and key stakeholders such as shippers, buyers, and other supply chain partners. Carrier Shipment Statuses ensures real-time visibility into the progress of a shipment as it moves through the supply chain, enabling stakeholders to monitor delivery schedules, address potential delays, and maintain high service levels.

By automating these updates, the process reduces manual intervention, speeds up communication, and minimizes errors. Shippers benefit from improved visibility and can proactively manage inventory, coordinate resources, and adjust operations based on visibility into the progress of a shipment.
