Meet with TraceLink at LogiPharma 2026

Sheraton Boston Hotel Boston, Massachusetts
Duration: Oct 05, 2026 - Oct 07, 2026

Meet with TraceLink at LogiPharma 2026

Cost volatility, rapid advances in AI, rising tariffs, climate pressure, and personalized therapies are reshaping the life sciences and healthcare supply chain. LogiPharma U.S. brings together industry leaders to address this inflection point and explore the strategies, technologies, and partnerships that will shape what comes next.

Meet with TraceLink at LogiPharma to explore how the Agentic Supply Chain Operating Model can help companies respond to these pressures by combining human expertise with agentic work. Built for the realities of multienterprise supply chains, this model enables teams and governed AI agents to work together with the business information and operational context needed to improve productivity, decision-making, and business performance.

Why Meet with TraceLink?

- **Put AI to Work Where It Can Make a Difference**

Explore where governed OPUS Agents can take on specialized operational work—from monitoring transactions and changing conditions to supporting decisions and completing tasks—while operating within defined objectives,

rules, permissions, and human oversight.

- **Strengthen Execution with Trading Partners**

See how TraceLink helps digitalize the transactions and processes that move between companies, creating shared operational context for orders, inventory, shipments, forecasts, invoices, exceptions, and other critical supply chain activity.

- **Improve Performance Through Better Supply Chain Execution**

See how digitalized transactions and processes, real-time operational context, and more continuous coordination of work can help reduce manual effort and delays, improve inventory and service performance, lower execution costs, and strengthen resilience across the supply network.

Explore What's Possible for Your Supply Chain

Meet with TraceLink at LogiPharma U.S. for a closer look at how the Agentic Supply Chain Operating Model can be applied to real supply chain operations. Explore relevant use cases for governed OPUS Agents, see how real-time business information and operational context support agentic work, and discuss where these capabilities can improve execution and business performance in your organization.

Fill out the form on this page to schedule your meeting today.
