What's new in the system 2026.4.0 release

Explore what's new in the Master Data Exchange, version 2026.3.0 release. To learn more about what's new in the Master Data, solution version 16.0.0 that provides the user interface for this app, see .

Release information

This document describes the TraceLink capabilities included in the Master Data Exchange, version 2026.3.0 app release, which is available on Validation on 27 Oct 2026 and Production on 24 Nov 2026.

The following apps are impacted by this release and will be updated to the version listed:

- Master Data Exchange, version 2026.3.0

Solutions supported by this app version:

- Master Data, solution version 16.0.0

The features below are in order of functional relevance (i.e. the typical order in which a user executes a function or task).

This Help Center is subject to change based on the deployment of the release. In the event of changes, the Help Center will be updated within one week of release deployment. Deployment completion can be confirmed in the TraceLink Release Notice email.

Revisions

Date	Revision	Description
25 Sep 2026	01	Initial version.

API features

There is no new or updated API functionality included in this release.

System features

The following new or updated functionality is included in this release.

Support Employer Identification Number in Master Data

Company Administrators can now add **Employer Identification Number (EIN)** as an identifier type for the following Master Data:

- [Company](#)
- [Company Location](#)
- [Partner](#)
- [Partner Location](#)

Company Administrators can add, view, update, and remove EINs through the UI and Master Data imports.

Each entity can have only one EIN, which Company Administrators can designate

as the primary identifier. EINs are not inherited between companies or partners and their respective locations, so Company Administrators must add and manage an EIN separately for each location.

Impact analysis

- Interface options:
 - Processing
- Business segment impacts:
 - All business segments for both Owners and Partners

Improve Product Master Data Display and Search

Users can now more easily view, identify, and find Master Data with the following enhancements, helping users efficiently manage product information while providing a more consistent experience across OPUS:

- **Business Type** in Product Master Data now uses a standard picklist that allows users to select a single value instead of multiple values.
- Compact collection sections on the View and Edit screens now use a two-column layout, reducing vertical scrolling and improving readability.
- Compact collection items can display combined keys using multiple attributes, making it easier to identify specific records without expanding them.
- Search includes additional filter options, including **Country Market Code**, **Product Code**, and **Product Group Code**, allowing users to narrow search results and find products more quickly.

Impact analysis

The impacts for these features are the same as the feature in the Master Data, solution version 17.0.0 release.

Resolved issues

There are no resolved issues in this release.

Known issues

There are no known issues in this release.
