What's new in the Standard Link Actions, version 2026.3.0

Release information

This document describes the TraceLink capabilities included in the Multienterprise Process Link, Standard Link Actions, version 2026.3.0 app release which is available on Validation on 03 Sep 2026 and Production on 20 Sep 2026.

These release notes are subject to change based on the deployment of the release. In the event of changes, the release notes and any related documentation will be updated within one week of release deployment. Deployment completion can be confirmed in the TraceLink Release Notice email.

Revisions

Date	Revision	Description
20 Aug 2026	01	Initial version.
14 Mar 2026	02	The following updates have been made since the previous revision was distributed: • The Production release date is updated from 04 Oct 2026 to 20 Sep 2026 in Release information section. • 0 issues are added to Resolved issues. • 0 issues are added to Known issues.

API features

Standard Link Actions, version 2026.3.0

The following new or updated API functionality is included in this release.

Exchange data with KINAXIS via MINT Standard Link Actions

Companies can use Standard Link Actions to asynchronously exchange data between TraceLink and the KINAXIS ERP system with OAuth2 authentication. The XTT-Link-Actions app uses JavaScript code snippets to interact with external systems directly. Connecting directly to external systems enables Multienterprise Information Network Tower to leverage XTT javascript snippets and automatically pull transactions from and send transactions to external systems in the formats used natively by those systems. TraceLink, pulling and pushing transactions in formats native to external systems enables companies to use Multienterprise Information Network Tower and continue doing business in the formats they do today without having to convert their data into additionally formats accepted by TraceLink. The javascript code for a link action is stored is stored in the Global Catalog Exchange (GCX) or the Shared Catalog Manager (SCM).

The following Standard Link Action transaction is available for KINAXIS ERP system:

KINAXIS Forecast Plan Response Outbound

Standard Link Actions uses the Forecast Plan Response API to pull forecast plan response transactions from the KINAXIS ERP system into TraceLink. A KINAXIS forecast plan response provides the supplier's ability to meet the buyers' anticipated product quantity needs for an upcoming period of time. After TraceLink receives and processes the Forecast Plan Response transaction, the transaction becomes available for users to view or edit in the Web UI.

The following new message is available for forecast plan in this release:

- STD_Transform_MPL_Kinaxis_ForecastPlanResponse_OB_V1

Impact analysis

- Interface options:
 - API
- Business segment impacts:
 - All business segments for both Owners and Partners

KINAXIS Forecast Plan Inbound

Standard Link Actions uses the Forecast Plan API to pull forecast plan transactions from the KINAXIS ERP system into TraceLink. A KINAXIS forecast plan provides notice to a supplier about the buyer's anticipated product quantity needs for an upcoming period of time.. After TraceLink receives and processes the Forecast Plan transaction, the transaction becomes available for users to view or edit in the Web UI.

The following new message is available for forecast plan in this release:

- STD_Transform_MPL_Kinaxis_ForecastPlan_IB_V1

Impact analysis

- Interface options:
 - API
- Business segment impacts:
 - All business segments for both Owners and Partners

KINAXIS Inventory Balance Outbound

Standard Link Actions uses the Inventory Balance API to pull Inventory balance transactions from the KINAXIS ERP system into TraceLink. A KINAXIS Inventory balance provides the available and upcoming inventory levels with their remote or third-party warehouses or buyers. After TraceLink receives and processes the Inventory Balance transaction, the transaction becomes available for users to view or edit in the Web UI.

The following new message is available for forecast plan in this release:

- STD_Transform_MPL_Kinaxis_ForecastPlan_IB_V1

Impact analysis

- Interface options:
 - API
- Business segment impacts:
 - All business segments for both Owners and Partners

Exchange data with SAPHANA via MINT Standard Link Actions

The following are the Standard Link Action transactions available for HANA ERP system:

SAPHANA Purchase Order Inbound

Standard Link Actions uses the Purchase Order API to pull purchase order transactions from the SAPHANA ERP system into TraceLink. A SAPHANA purchase order procures goods or services from a vendor or supplier. After TraceLink receives and processes the Purchase Order transaction, the transaction becomes available for users to view or edit in the Web UI.

The following new message is available for purchase order acknowledgment in this release:

- STD_Transform_MPL_SAPHANA_PurchaseOrder_IB_V1

Impact analysis

- Interface options:
 - API
- Business segment impacts:
 - All business segments for both Owners and Partners

SAPHANA Purchase Order Outbound

Standard Link Actions uses the Purchase Order API to pull purchase order transactions from the SAPHANA ERP system into TraceLink. A SAPHANA purchase order procures goods or services from a vendor or supplier. After TraceLink receives and processes the Purchase Order transaction, the transaction becomes available for users to view or edit in the Web UI.

The following new message is available for purchase order acknowledgment in this release:

- Business segment impacts:
 - All business segments for both Owners and Partners

System features

Standard Link Actions, version 2026.3.0

There is no new or updated system functionality included in this release.

Resolved issues

Standard Link Actions, version 2026.3.0

There are no resolved issues in this release.

Known issues

Standard Link Actions, version 2026.3.0

There are no known issues in this release.

Release information

This document describes the TraceLink capabilities included in the Multienterprise Process Link, version 2024.6 app release, which is available on Validation on 26 Sep 2024 and Production on 10 Oct 2024.

The following apps are impacted by this release and will be updated to the version listed:

Multienterprise Process Link, version 2024.6

Solutions supported by this app version:

Multienterprise Information Network Tower, solution version 11.0

The features below are in order of functional relevance (i.e. the typical order in which a user executes a function or task).

These release notes are subject to change based on the successful deployment of the release. In the event of changes, the release notes and any related documentation will be updated within one week of release deployment. Deployment completion can be confirmed in the TraceLink Release Notice email.

Patch releases

The following patches are released for this version:

Multienterprise Process Link, version 2024.6.0M1 is available on Validation on 01 Oct 2024 and Production on 10 Oct 2024.

These patches are cumulative, and the most recent patch release includes functionality from all previous versions.

Revisions Date Revision Description 12 Sep 2024 01 Initial version. 26 Sep 2024 02

The following updates have been made since the previous revision was distributed:

The Send and Receive Geolocations in the Web UI and via B2B Message in GeoJSON Format is added to the release. The following transforms were removed from the Enhancements to Existing Messages

feature:B2B_IDoc_INVOIC02_Invoice_OB_V2B2B EDI EDIFACT_INVOIC_Invoice_IB_V3B2B EDI_

EDIFACT_INVOIC_Invoice_OB_V2B2B_EDI_X12_810_Invoice_IB_V4B2B_EDI_X12_810_Invoice_OB_V2B2B_EDI_X12_830_ForecastPlan_IB_V3 0 issues are added to Resolved issues. 0 issues are added to Known issues. 01 Oct 2024 03 The following updates have been made since the previous revision was distributed: Issue information for the Multienterprise Process Connect, version 2024.6.0M1 patch is added: The Enhancements to Existing Invoice and Forecast Plan Messages feature is added. 1 issues are added to Resolved issues. 0 issues are added to Known issues. 01 Oct 2024 04

The following updates have been made since the previous revision was distributed:

The following transforms were removed from the Enhancements to Existing Invoice and Forecast Plan Messages

feature: B2B_EDI_EDIFACT_INVOIC_Invoice_IB_V3B2B_EDI_EDIFACT_INVOIC_Invoice_OB_V2 API features Multienterprise Process Link, version 2024.6.0M1

The following new or updated API functionality is included in this release.

Enhancements to Existing Invoice and Forecast Plan Messages

The invoice and forecast transforms are updated to improve how TraceLink maps certain elements within the transform and elements and enumerations are added to the transforms to record additional information customers may want to include. The following existing invoice and forecast plan message types have been updated and their transform versions incremented to the versions below:

Forecast transforms: B2B_EDI_X12_830_ForecastPlan_IB_V3 Invoice transforms: B2B_IDoc_INVOIC02_Invoice_OB_V2B2B_EDI_X12_810_Invoice_IB_V4B2B_EDI_X12_810_Invoice_OB_V Multienterprise Process Link, version 2024.6.0

The following new or updated API functionality is included in this release.

The Multienterprise Process Connect app is renamed to Multienterprise Process Link in version 2024.6.0. This change aligns the app name more closely with the business functionality that the app provides.

Update the Multienterprise Information Network Tower Solution and Multienterprise Process Link App to Leverage the Platform Capabilities Included with the OPUS Ensemble Release

The Multienterprise Information Network Tower solution and Multienterprise Process Link application are updated in this release to leverage the capabilities and efficiencies included in the OPUS Ensemble release. These updates reduce the demands on back-end processing, allowing for the development of more powerful solutions and applications. As a result of these updates, the search screen for each business object is updated along with the Search B2B Messages screen, which is renamed to Search Business Transactions. Additionally, all existing functionality is preserved, but has been updated and reconfigured to integrate with the platform capabilities enabled by the OPUS Ensemble release.

Impact analysis

Interface options: Web UI API Business segment impacts: All business segments for both Owners and Partners. New Search Screen for Serialization Traceability Exchange (STE) Messages

The new Search Serialization Transactions screen is available to view the status of and troubleshoot any transforms using the new STE object type (e.g. MPC_STE_EPCIS_SerializedShipmentNotice_1_2_IB) that is separate from the search screen for standard object types (e.g. B2B_IDoc_ORDERS05_PurchaseOrder_IB). Previously, all object types for B2B messages were available on the same search screen. For example, when customers exchange serialized shipment notice B2B messages via Multienterprise Process Link, users now search for them on a new screen different than the existing one they search for non-STE B2B messages (e.g. B2B_IDoc_ORDERS05_PurchaseOrder_IB) on. Giving STE messages their own search screen enables customers to quickly access the messages containing their serialization data without having to filter through a large volume of non serialization messages.

To enable the STE messages to have their own search screen, the back-end STE object type is updated to leverage the platform capabilities included with the OPUS Ensemble Release.

Impact analysis

Interface options: Web UI Business segment impacts: All business segments for both Owners and Partners Send and Receive Geolocations in the Web UI and via B2B Message in GeoJSON Format

Companies can exchange geocoordinates with their customers using the Multienterprise Information Network Tower Web UI or via B2B message in GeoJSON format using Multienterprise Process Link. Exchanging geographic coordinates via Web UI and asynchronously via B2B message allows suppliers, typically of agricultural goods, to communicate with their customers the exact location that their product was produced on. Communicating the exact location where goods were produced allows downstream supply chain partners (e.g. 3PLs, Wholesalers) to verify the origin of the goods they receive, ensuring compliance with government regulations, such as the European Union Deforestation-free Regulation (EUDR) Information System (IS), that prohibit the sale of product sourced from illegal areas (e.g. land protected by deforestation laws).

In the Web UI, Owners can create geocoordinates; save a draft for submission at a later date; add, view, or delete individual geocoordinates to the transaction before submitting the geocoordinates to customers. Additionally, Owners can search for; view the details of the geocoordinates; and troubleshoot and resubmit geocoordinates.

For companies whose Partners do not own Multienterprise Information Network Tower, Owners can add their Partner's users to their network and assign them the appropriate roles to enable them to search for and view the details of geocoordinates in the Web UI using the Owner's instance of Multienterprise Information Network Tower.

Additionally, Multienterprise Process Link enables companies and their Partners to search for, view, and troubleshoot geolocation messages; leverage a record of their geocoordinate

details for business records or compliance purposes; and retrieve the input, output, and canonical files for a given geocoordinate message using the Search Business Transactions screen in the Multienterprise Information Network Tower Web UI.

The following new JSON messages are available for sending or receiving geocoordinates in this release:

B2B_GeoLocation_IB_V3 (inbound) B2B_GeoLocation_OB_V3 (outbound)

Impact analysis

Interface options: API Business segment impacts:All business segments for both Owners and Partners Send and Receive Inventory Updates in IDoc and X12 Formats

Companies that own or link to Multienterprise Process Link can exchange inventory updates with their Partners via TraceLink in IDoc and X12 formats. Exchanging inventory updates asynchronously via Multienterprise Process Link allows suppliers to communicate with their remote or third-party warehouses, 3PLs, or CMOs about changes to the available inventory for specific products. Communicating inventory updates allows companies to maintain accurate inventory records, which ensures compliance with government regulations, optimizes warehouse operations, reduces inefficiencies, and prevents stockouts or overstocks. Companies are also able to make informed decisions regarding procurement, production, and inventory management strategies.

Additionally, Multienterprise Process Link enables companies and their Partners to search for, view, and troubleshoot inventory update messages; leverage a record of their inventory update details for business records or compliance purposes; and retrieve the input, output, and canonical files for a given inventory update using the Search Business Transactions screen in the Multienterprise Information Network Tower Web UI.

The following new messages are available for sending or receiving inventory updates in this release:

IDoc (inbound):B2B_IDoc_MBGMCRCR03_InventoryUpdate_IB_V1 X12
(outbound):B2B_EDIX12_947_InventoryUpdate_OB_V1

Impact analysis

Interface options: API Business segment impacts:All business segments for both Owners and Partners Send and Receive Return Authorization Requests in X12 and IDoc Formats

Companies that own or link to Multienterprise Process Link can exchange return authorization requests with their Partners via TraceLink in X12 and IDoc formats. Return authorization requests are initiated by buyers to obtain approval from sellers for returning goods due to defects, incorrect shipments, or excess stock, ensuring that the return process adheres to the terms of the purchase order. Exchanging return authorization requests asynchronously via Multienterprise Process Link allows buyers to issue return authorization request messages to suppliers.

Additionally, Multienterprise Process Link enables companies and their Partners to search for, view, and troubleshoot return authorization request messages; leverage a record of their return authorization requests details for business records or compliance purposes; and retrieve the input, output, and canonical files for a given return authorization request using the Search Business Transactions screen in the Multienterprise Information Network Tower Web UI.

The following new messages are available for sending or receiving inventory updates in this release:

X12 (inbound):B2B_EDI_X12_180_ReturnAuthorizationRequest_IB_V1 IDoc
(outbound):B2B_IDoc_ORDERS_ORDERS05_ReturnAuthorizationRequest_OB_V1

Impact analysis

Interface options: API Business segment impacts:All business segments for both Owners and Partners Send and Receive Return Authorization Responses in X12 and IDoc Formats

Companies that own or link to Multienterprise Process Link can exchange return authorization responses with their Partners via TraceLink in IDoc and X12 formats. Return authorization responses communicate the approval or rejection status of a return authorization request to the buyer, along with return information, such as the return authorization number, return address, and shipping label. Exchanging return authorization responses asynchronously via Multienterprise Process Link allows suppliers to issue return authorization responses messages after processing return authorization requests from buyers.

Additionally, Multienterprise Process Link enables companies and their Partners to search for, view, and troubleshoot return authorization responses; leverage a record of their return authorization responses for business records or compliance purposes; and retrieve the input, output, and canonical files for a given inventory update using the Search Business Transactions screen in the Multienterprise Information Network Tower Web UI.

The following new messages are available for sending or receiving inventory updates in this release:

X12 (inbound):B2B_EDI_X12_180_ReturnAuthorizationResponse_IB_V1 IDoc
(outbound):B2B_IDoc_ORDRSP_ORDERS05_ReturnAuthorizationResponse_OB_V1

Impact analysis

Interface options: API Business segment impacts:All business segments for both Owners and Partners Enhancements to Existing Messages

A number of existing transforms are updated to improve how TraceLink maps certain elements within the transform and elements and enumerations are added to the transforms to record additional information customers may want to include. The following existing message types have been updated and their transform versions incremented to the versions below:

Advanced Ship Notice

transforms:B2B_IDoc_DELVRY07_ASN_IB_V2B2B_EDI_X12_856_AdvanceShipNotice_IB_V2B2B_EDI_EDIFACT_DESADV_AdvanceShipNotice_IB_V2 Batch transforms
B2B_IDoc_BATMAS_BATMAS03_BatchMaster_IB_V2 Forecast
transforms:B2B_IDoc_DELFOR_DELFOR02_ForecastPlanResponse_IB_V2B2B_IDoc_DELFOR_DELFOR02_ForecastPlan_OB_V2 Inventory Balance & Inventory Update
transforms:B2B_IDoc_INVRPT_INVRPT01_InventoryBalance_IB_V2B2B_EDI_X12_846_InventoryBalance_IB_V2B2B_EDI_X12_947_InventoryUpdate_IB_V2 Invoice
transforms:B2B_IDoc_INVOIC02_Invoice_IB_V2 Price Sales Catalog
transforms:B2B_IDoc_PRICAT_PRICAT03_PriceSalesCatalog_IB_V2 Purchase Order & Purchase Order Acknowledgment
transformsB2B_IDoc_ORDERS05_PurchaseOrder_IB_V4B2B_EDI_X12_850_PurchaseOrder_IB_V3B2B_EDI_EDIFACT_ORDERS_PurchaseOrder_IB_V3B2B_IDoc_ORDERS05_PurchaseOrderAcknowledgment_IB_V3B2B_EDI_X12_855_PurchaseOrderAcknowledgment_IB_V3B2B_EDI_EDIFACT_ORDRSP_PurchaseOrderAcknowledgment_IB_V2 Remittance Advice
transforms:B2B_IDoc_REMADV_PEXR2003_RemittanceAdvice_OB_V2B2B_EDI_X12_820_RemittanceAdvice_IB_V2 Warehouse Shipping Advice
transformsB2B_IDoc_SHPCON_DELVRY07_ShipAdvice_IB_V2B2B_EDI_X12_945_WHS_ShipAdvice_IB_V3 Warehouse Shipping Order
transformsB2B_IDoc_SHPORD_DELVRY03_ShipOrder_IB_V2B2B_EDI_X12_940_WHS_ShipOrder_IB_V2 Warehouse Stock Transfer Shipment Advice
transformsB2B_IDoc_WMTORD_WMTOID02_WHS_StockTransferShipAdvice_IB_V2B2B_EDI_X12_943_WHS_StockTransferShipAdvice_IB_V2 Warehouse Stock Transfer Receipt
AdviceB2B_IDoc_WMTOCO_WMTCID03_WHS_StockTransferReceiptAdvice_IB_V2B2B_EDI_X12_944_WHS_StockTransferReceiptAdvice_IB_V3

Additionally, the internal processing for the Serialized Shipment Notice message is updated, as a result, the transform version is updated to MPC_STE_EPCIS_SerializedShipmentNotice_1_2_IB_V4. This update does not impact any customer facing elements in the transform.

Impact analysis

Interface options: API Business segment impacts:All business segments for both Owners and Partners System features Multienterprise Process Link, version 2024.6.0M1

There is no new or updated system functionality included in this release.

Multienterprise Process Link, version 2024.6.0

There is no new or updated system functionality included in this release.

Resolved issues Multienterprise Process Link, version 2024.6.0M1

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

Transform updates do not require any system changes and include content upgrades that do

not impact other customer use of the system. The transforms are independently versioned and configured for use specifically by an Administrator at each company that will use them.

Partner transform updates are included to inform customers whose networks might include the particular Partner. Note that each transform update identifies the transform version number (e.g., _V1_1). Customers can request that their Partner upgrade to the noted transform version when necessary.

ID Interface Issue Description CMCP-37577: Update the Inbound IDoc Purchase Order Acknowledgment transform to Map Data from the SAPControlFileHeader. Web UI

The field mapping for the control segment fields SNDPRN and RCVPRN were being incorrectly mapped from canonical fileSenderNumber and fileReceiverNumber by default. The field mapping for the control segment fields SNDPRN and RCVPRN are updated to map from the canonical IDoc control segment attributes fileSenderType/ediInterchangePartyValue and fileReceiverType/ediInterchangePartyValue, and only map canonical fileSenderNumber and fileReceiverNumber if the sapControlFileHeader values are not present.

Pre-Release Transform Name: B2B_IDoc_ORDERS05_PurchaseOrderAcknowledgment_OB_V3

This issue has been resolved.

Multienterprise Process Link, version 2024.6.0

There are no resolved issues in this release.

Known issues Multienterprise Process Link, version 2024.6.0M1

There are no known issues in this release.

Multienterprise Process Link, version 2024.6.0
