What's new in the user interface 14.0.0 release

Explore what's new in the Administration, solution version 13.0.0 release. What's new in the system changes.

Release information

This document describes the TraceLink capabilities included in the Administration, solution version 13.0.0 release, which is available on Validation on 27 Oct 2026 and Production on 24 Nov 2026.

The following solutions are impacted by this release and will be updated to the version listed:

- Administration, solution version 13.0.0

Apps that support this solution version:

- Administration, version 2026.2.0

The features below are in order of functional relevance (i.e. the typical order in which a user executes a function or task).

These release notes are subject to change based on the deployment of the

release. In the event of changes, the release notes and any related documentation will be updated within one week of release deployment. Deployment completion can be confirmed in the TraceLink Release Notice email.

Revisions

Date	Revision	Description
29 Sep 2026	01	Initial version.
27 Oct 2026	01	The following updates have been made since the previous revision was distributed: • 0 issues are added to Resolved Issues. • 0 issues are added to Known Issues.

UI features

The following new or updated functionality is included in this release.

Enhanced Password Policy Configuration

This release adds security controls for password requirements and privileged users. **System Administrators** can configure password requirements for their company. **System Administrators** and **User Administrators** can designate users as **Privileged Users**.

Enhanced Password Validation Controls

When **System Administrators** select Use TraceLink security to authenticate users as the Authentication Method in Single Sign-On Settings, they can now configure the following security controls:

- Breached Password Check – Prevents users from setting passwords found in known breach databases.
- Username Similarity Check – Prevents users from setting passwords that conflict with supported username-based password validation rules.

Privileged User Password Requirements

In the General section of the Users, Company Users, User Details screen, **System Administrators** and **User Administrators** can now:

- Privileged User – Designate a user as a **Privileged User**. This designation does not grant additional application roles, permissions, or administrative access.

In Single Sign-On Settings, when Use TraceLink security to authenticate users is selected as the Authentication Method, **System Administrators** can now:

- Minimum Password Length for Privileged Users – Set a separate minimum password length for users designated as **Privileged Users**. If no value is configured, the standard Minimum Password Length applies.

These enhancements provide greater flexibility and help companies enforce stronger, more consistent password security requirements.

Impact analysis

- Interface options:
 - Web UI
- Business segment impacts:
 - All business segments for Owners.

Enhanced Session Security with IP Address Restriction

This release introduces Restrict Sessions by IP Address, a company-level setting in the General section of Single Sign-On Settings. **System Administrators** can use Restrict Sessions by IP Address to associate an active user session with the IP address used to establish the session.

If the IP address changes during an active session, the user may be required to authenticate again. Restrict Sessions by IP Address gives **System Administrators** greater control over session security and helps prevent active sessions from being used from a different IP address.

Impact analysis

- Interface options:
 - Web UI
- Business segment impacts:
 - All business segments for Owners.

Resolved issues

Administration, solution version 14.0.0

The following issues are resolved in this release. The prefixes are for internal TraceLink tracking purposes and do not mean anything to customers.

There are no resolved issues in this release.

Known issues

Administration, solution version 14.0.0

There are no known issues in this release.
