Integrated Agentic Business Processes Transform the Supply Chain Operating Model

.toc-container{display: none !important;}

Discover how governed AI agents and human teams can work together to improve supply chain productivity, responsiveness, and business performance.

Supply chains generate a continuous stream of transactions, events, and changing business conditions. Responding to those changes still requires significant human effort to gather information, evaluate impacts, coordinate decisions, and manage work across companies and systems.

Integrated Agentic Business Processes (ABPs) offer a new approach. By linking business activity, operational knowledge, semantic reasoning, and governed OPUS

Agents, organizations can initiate and coordinate work as conditions change, while maintaining human oversight and accountability.

Download the whitepaper to learn how organizations can:

- Scale specialized supply chain work with governed OPUS Agents operating alongside human teams.
- Turn business events into coordinated action using shared operational context and knowledge.
- Apply governed semantic reasoning to support consistent, reliable decisions.
- Deploy repeatable Agentic Business Processes across functions, partners, and geographies.
- Measure agent performance, business Outcomes, and operational improvements through continuous monitoring and governance.

Explore the architecture and operating principles behind Integrated Agentic Business Processes and their role in building a more responsive, scalable supply chain.
