Driving Decision Intelligence Through the Agentic Supply Chain Operating Model

Supply chain leaders need timely, reliable information to anticipate disruptions, evaluate trade-offs, and make better decisions across planning, manufacturing, and distribution. Agentic AI creates new opportunities to improve these capabilities by bringing together data, business processes, and intelligent agents to support faster, more coordinated decisions.

At **FutureLink Barcelona 2026**, Wayne McDonnell, Managing Director, Life Sciences, Supply Chain & Network Operations at Deloitte Consulting LLP, explains how the Agentic Supply Chain Operating Model can help organizations improve visibility and decision-making across the end-to-end supply chain. Drawing on real-world examples from medical device and biopharmaceutical manufacturers, McDonnell discusses inventory control towers, scenario modeling, and AI agents that help identify supply risks and recommend corrective actions. He also demonstrates Deloitte's self-healing supply chain capabilities for anticipating logistics disruptions and evaluating mitigation strategies.

Key takeaways:

- Learn how integrating data, transactions, and business processes can improve

visibility and support better decisions across supply chain functions.

- Discover how AI agents and scenario modeling can help identify inventory shortages, assess supply disruptions, and evaluate mitigation options while keeping humans involved in critical decisions.
- Understand why redesigning business processes and developing new employee skills are essential to improving coordination between supply chain planning and execution.

Watch now to learn how organizations can apply agentic AI to anticipate disruptions, improve supply chain performance, and make faster, better-informed decisions.
