# Supply Chain Work Management for Direct Supply

### Integrate Once, Interoperate with All Suppliers and CMOs. Purchase Order Orchestration.

For procurement, supply chain, and external manufacturing leaders looking to reduce supply chain risk and improve chain visibility and execution, integrating and interoperating with suppliers and contract manufacturers remains one of the greatest challenges. The need for more comprehensive exchange and real-time communication is critical as supply chain volatility has driven more variability in orders, date changes, cancellations, and material shortages. Limited integration and inadequate, ad hoc communication today's "as-is" procurement processes is one of the causes of inaccurate plans that lead to longer order fulfillment and reduced on-time, in-full performance. To address these challenges, new capabilities that link people, processes, and enterprises with suppliers are required to improve with faster and better decision making.

### Integrate with all Suppliers with a Single Link

TraceLink Supply Chain Work Management for Direct Supply is a revolutionary new way to integrate, interoperate, and execute work processes with all suppliers and contract manufacturers. Each company deploys and controls Supply Chain Work Management for Direct Supply within a network of digital supply networks. This is the true power of the Internet of Supply Chains (IoSC). Procurement professionals can engage suppliers to exchange purchase orders, execute changes, monitor status, and resolve material shortages and other issues quickly to keep customer shipments on time.

Supply Chain Work Management for Direct Supply is built and hosted on TraceLink Opus, the Platform for the Internet of Supply Chains (IoSC). Opus links people, processes, systems, and enterprises into a collective information network for intelligent business execution. Supply Chain Work Management enables customers to create digital networks with partners to exchange business process information through secure, configurable links. Supply chain partners integrate to the Opus network once and can then interoperate with all other partners to accelerate cross-company sharing of supply chain data. Supply Chain Work Management is the fastest and easiest path to supply chain digital transformation.
